The author

Fabien Bouglé is a French environmentalist whistleblower. For 10 years, he has denounced the ecological and financial disaster of wind turbines. Between 2011 and 2016, he was in connection with the Central Corruption Prevention Service of the French Ministry of Justice which unveiled the corruption scandal in the wind industry. He helped to make public in 2018, the exorbitant price of buying back electricity from offshore wind turbines. Following these revelations, this rate was renegotiated downward by the French government.

Author of numerous tribunes on wind turbines, he was heard by the parliamentary commission of inquiry on renewable energy of the National Assembly organized in 2019. Businessman in the financial and cultural sector, Fabien Bouglé is also an elected municipal official.

Wind Turbines

The black side of ecological transition

A damning document on wind-turbines, a lot less ecological than we are led to believe...

Key points :

12.000 copies sold since publication.

A topical and global subject in the field of ecological transition

By a field expert.

In a few years, wind turbines have become the international standard of the ecological transition.

They are everywhere, embodying the symbol of the so-called green electricity: on institutional websites, in school books, in advertisements, in films, in the media... They have invaded the world's landscapes, have brutally taken over the countryside or the sea and have become, through systematic propaganda, the symbol of ecology and the fight for the climate.

And yet, behind this green image, many secrets lay hidden....

This book is the result of ten years of relentless struggle against the powerful wind industry lobby and aims to reveal the dark side of wind energy. A documented synthesis of data and studies on the subject, it reveals - from France - how wind energy, under the guise of ecological transition, is in reality a real ecological and financial scandal on a global scale.

Pollution, non-recyclable raw materials, radioactive waste, CO2 emissions, serious damage to health and biodiversity, misappropriation of public funds, increase in the price of electricity, denial of democracy, destruction of jobs, hyper-taxation, NGOs in conflict of interest, corruption, mafia ... discover in this book everything you need to know and that is hidden from you on wind turbines....

Matthew Crawford (Préface)

New Barbarism : Artificial Intelligence.

A critique of ARTIFICIAL INTELLIGENCE written by two field experts for us to measure the wrongs made to society by the mad race to imitate the human brain.

Key points :

-Foreward by **AMERICAN AUTHOR MATTHEW CRAWFORD**

-Written by AI field experts

From being geolocalised non-stop by our Uber applications to being offered automatic responses by Google to messages we've just received, or the manufacture of autonomous cars, these are just a few of the examples to illustrate how artificial intelligence continues to develop. This critique, by field specialists Marie David and Cédric Sauviat, reveals the historical, philosophical and anthropological aspects of the ever-imposing reality of AI in our daily lives.

Under the guise of mere technology, AI represents an anti-humanism philosophy. It promotes an equivalence between the human being and the machine; it allows for the imagination of thought without the thinker, it denies subjectivity and removes man from his position as the single holder of logos. Thus, man is at risk of becoming passive and human relationships at risk of destruction.

What we must also realize is that the development of artificial intelligence is also made for the quasi-exclusive profit of the GAFA four - Google, Apple, Facebook et Amazon - destroying traditional jobs and disrupting the job market on a global level.

Global Sustainability

The manifesto

A call to put sustainability into the lives of every citizen.

A national issue for all countries around the world.

An efficient, effective and economical essay.

An essay to instruct and inspire.

Are we friends or enemies of the Environment ?

In this manifesto-essay, Delphine Batho draws the political consequences of past and future environmental disasters, and which are already making our existence on our planet precarious. As inhabitants and citizens we must make ecology our priority. Each commitment by state and association must take into account the « footprints » we are leaving on our planet.

At a time when environmental ministers worldwide are warning against the perils of "small steps", our convictions must carry and be transformed into concrete political programs. Delphine Batho appeals to all the forces of each country, from political personnel to civic members of society. What ever political ties we may have, we must draw strength from our various commitments, and join forces in a single political combat.

The Child and Nature

AWAKENING TO THE LINK

This education document targets parents educators and collectivities.

It proposes an innovative approach to education in keeping with the times of ecological transition and the educational benefits of nature

Key points :

- A revolutionary educational experience!
- Many testimonies of children and educators.
- Many proposed activities for a concrete program.

This work recounts the results of a 'nature immersion' an educational experiment led by fifty volunteer schoolchildren. It shows how a prolonged experience in nature can enrich the participants' understanding of the balances in the world, and stimulate their spirit of benevolence and solidarity.

Supervised by a team of educators and researchers, the children's discovery is the great secret of the bond with nature, and, since the environment is no longer a living evidence for man, a bond which has long gone astray. And because "it is a sad thing to think that though nature speaks the human race does not hear it", as Jean Giono believed, it is gratifying to learn that this unique experience has given birth to tools and pedagogical guidelines intensifying the relationship between children and nature, from an awakening of attention and intelligence to the environment, for stronger cohesion and autonomy.

The book is therefore a real manual for reconnecting children to nature, which presents and explains each of the exercises experienced during this adventure, as each natural environment is progressively worked on.

With the rediscovery of the great secret of this link, thrown into oblivion by our multi-screen connected lifestyles, the proof has been made that the recognition of its existence and its importance by the actors of education can, at a time of major climatic upheaval, provoke change at the root.
